

WEST PASCO MODEL RAILROAD DESIGN TEAM MEETING NOTES

DATE: 07/14/2023 (Friday)

ATTENDEES: Ralph, Bill, Tom, Neil, Keith

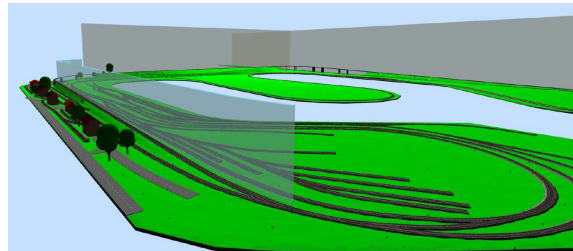

TITLE: Talking about the hot corner

IMPROMPTU MEETING

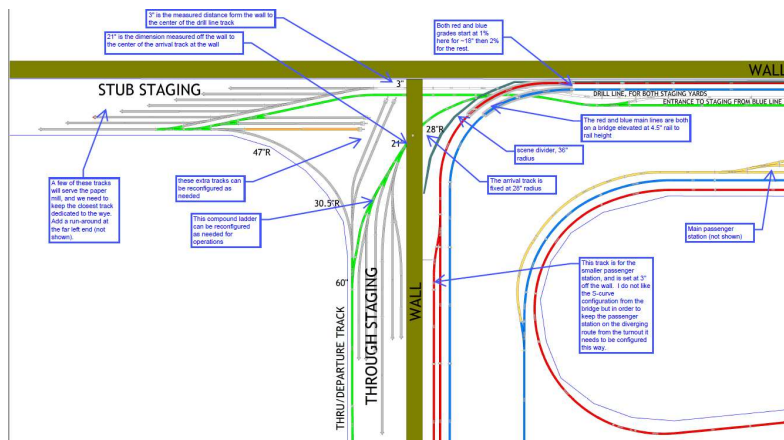

The feed through (the Hot Corner) from the layout room to the yard is completed. There are two tracks entering the rear section to the old staging yard. The radius of the curve coming into the main yard was corrected. This did involve revising the size of the pass through in the wall.

Bill brought in a rendering he has been doing to help clarify the proposed scenery divider along the section facing the coolers. This type of rendering is helping visualize the designs in areas.

Bill has also drawn the proposed area around the Hot Corner. Seeing in track schematic form is a huge help to clarify the design of the track layout coming around from Rockville to the rear wall and the smaller station (old Rockville Yard station flats). Reaction seems to be extremely positive.

**WEST PASCO MODEL RAILROAD
DESIGN TEAM MEETING NOTES**

The design team advanced the conceptual design on the three peninsulas to allow further rendering to be developed as a tool during construction. Great effort Bill, Thank you.
