

WEST PASCO MODEL RAILROAD DESIGN TEAM MEETING NOTES

DATE: 08/25/2023

ATTENDEES: Ralph, Bill, Tom, Neil, Keith

TITLE: Almost there

Mainlines are about half way around the Port Charles lobe. The turn by the dock heading back is where the trackage is located. Some decking needs to be added before those two lines can be completed. The old Fells Point Station was found and was temporarily placed to allow for tracks to be fitted.

The elevated section along the meeting room wall now has the old Rockville Station structure in place. This image shows the mainline that connects the coal mine/lumber camp lobe to the Port Charles lobe.

A small section that connects the exit of the main yard to the Port Charles lobe still to be constructed. There is a small, projected engine facility in that area. That is still to be resolved.

Here are some overall photos of the progress.

The elevated section heading to Port Charles (upper)

The coalmine area

Union Station in Rockville with locomotive (to scale)

The waterfall and trestle at the end of the coal mine

While placing the representation of the power house for the papermill, the alert signal that will indicate occupancy on the drill track was illuminated. The sample oversized windows are being tested to meet the prototype building sample.
